TOTIME48 SERIES

P K

General Type[B1~B10]

- High-performance AlCrSiN coating, high temperature resistance and wear resistance.
- Excellent machining performance for general steel ($\leq HRC48$) and cast iron.
- A great variety of goods, high cost performance.

TOTIME3638 SERIES

M

Variable Lead Type[B12]

- High-performance variable lead, variable helix angle design, with excellent shock resistance.
- Suitable for stainless steel cutting.
- The special cutting edge design effectively solves the problem of chip sticking on the cutting edge and improves the tool life.

TOTIME3538 SERIES

P K

Variable Lead Type[B11]

- High-performance variable lead, variable helix angle design, with excellent shock resistance.
- Excellent machining performance for general steel and cast iron.
- Suitable for large depth and width of cutting.

TOTIME3538-MS SERIES

M S

Variable Lead Type[B13~B21]

- The high-performance variable lead and variable helix angle design can suppress vibration more effectively and achieve higher surface processing quality for superalloys.
- The machining performance is superior for titanium alloys, high-temperature alloys, and stainless steel.
- The cutting edge is designed with high strength to achieve stable cutting.

TOTIME38-MS SERIES

M S

For Titanium Alloys , High-temperature Alloys Type[B22~29]

1.Impacts on cutting edges are softened due to reduced vibration, resulting in longer, stable tool life.

2.The combination of GS coated grade with high wear resistance and robust substance.

3.To ensure cutting efficiency and achieve efficient machining for high-temperature alloys, nickel based alloys, and duplex stainless steel materials

TU45 SERIES

P K

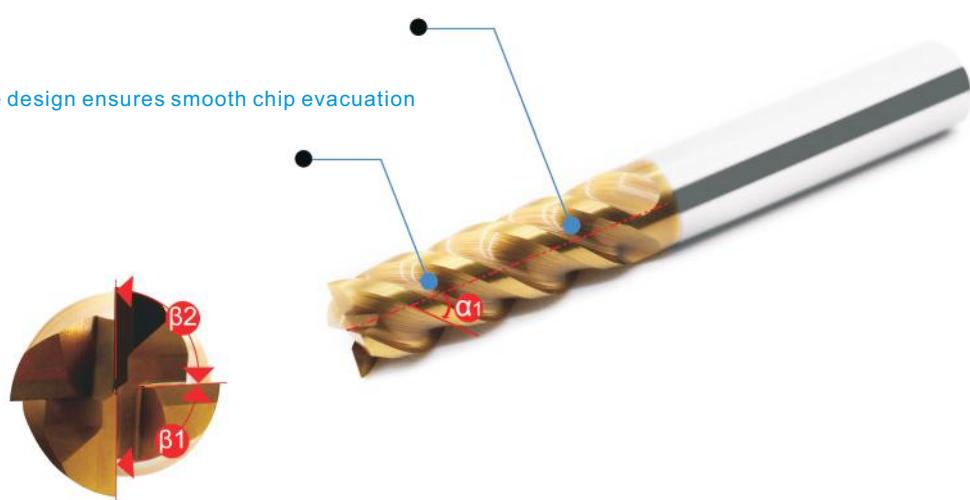

Variable Lead U-shaped Groove Type[B30]

$\alpha_1=45^\circ$ $\beta_1 \neq \beta_2$

The high-performance variable lead design can effectively suppress vibration and achieve higher surface processing quality for steel and cast iron.

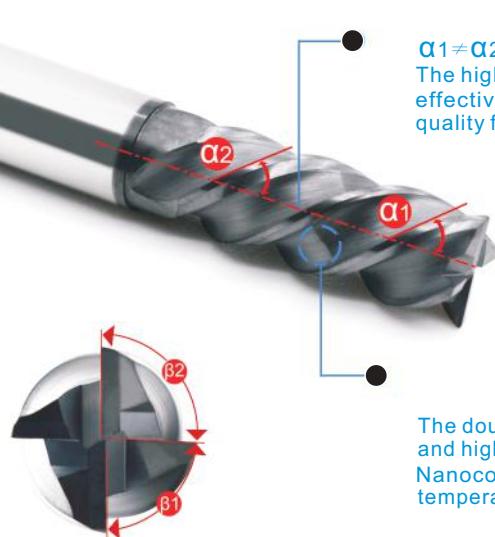

Precise U-shaped groove design ensures smooth chip evacuation in high-speed cutting.

TD3941 SERIES

P K

Variable Lead Double-core Type[B31]

The double-core designed ensures smooth chip removal and high rigidity and high stability of the product during roughing and heavy cutting. Nanocomposite coating ensures stable machining life even under high temperature machining conditions.

TOTIME48S/L-HA/HB SERIES

P K

Efficient and Powerful Variable Lead Type[B32]

TOTIME48-E SERIES[Inch]

P K

Efficient and Powerful Variable Lead Type[B33~B36]

- Increased process reliability due to stable cutting edges.
- Multifunctional – roughing and finishing with the same tool.
- Well-finished surface on the workpiece.
- Safe chip removal for all cutting edges.
- Low vibration.
- High-Feed.

TCM45 SERIES**P K**

Cermet Type[B37~B39]

- Cermet has low density, high wear resistance, excellent chemical stability, good high temperature performance and toughness, suitable for high-speed finishing and semi-finishing cutting.
- In particular, the affinity and friction coefficient between the material and the workpiece material are extremely low, and it is not easy to stick the tools and have built-up edge, making the machined surface more smooth.

TOTIME65 SERIES**H**

High Speed and High Hardness Type[B40~B45]

**TOTIME48-AL SERIES****N**

Non-ferrous Metal Type[B46~B49]

- The special cutter design achieves finishing and semi-finishing cutting of HRC48-65 high hardness materials.
- High-strength, high-toughness ultra-fine-grained base material and ALDUA self-developed coating can effectively improve tool life.

- End mill for aluminum alloy, copper alloy.
- Unique geometry design and unique treatment of rake face enhanced chip evacuation.
- The special edge design prevent the problem of sticking chips on the edge of the tool effectively,to achieve excellent surface processing quality.
- At the same time,TAC coating greatly improves the tool life.

TOTIME3839 SERIES**P K****Variable Lead Roughing Type[B50]**

- Suitable for rough machining of ordinary steel and cast iron materials ($\leq 48HRC$) with large cutting depth and large cutting width, with high metal removal rate.
- The design of dense teeth and wave teeth with unequal helix angle produces ultra-fine short chips during processing, achieves excellent chip removal performance, low cutting resistance and low machine load.
- Special edge treatment, effectively improve chipping resistance and wear resistance in the roughing process.

TDIA SERIES**N****Diamond Coating for Graphite Type[B51~B54]**

- Adopt diamond coating, strengthen bonding between coating and substrate, with high adhesion and high tool toughness.
- High-purity diamond coating film has good wear resistance and ensures long processing life.
- Suitable for semi-finishing and finishing of graphite workpieces such as graphite electrodes and graphite products.

TR/TCC SERIES**N**

For CFRP / GFRP[B55-B56]

**TCC SERIES** **N**

Suitable for aramid honeycomb, carbon fiber T300 T700 T800, glass fiber, and carbon composite materials.

TR SERIES **N**

Suitable for composite materials of aramid fiber, carbon fiber T300, PEEK polymer materials.

Micro Diameter SERIES**P M K N H**

[B57~B65]

**TMU SERIES** **P M K****TMAL SERIES** **N****TMH SERIES** **H**

- TMU series - high precision universal micro diameter end mill.
- TMAL series - micro diameter end mill for high-precision insert molds, mold electrodes, and precision parts.
- TMH series - micro diameter end mill for processing high hardness and high precision molds.

ZSTNB/ZSTNR SERIES**P H**

Taper Neck Back Draft Type[B66~B72]

- Suitable for deep groove finishing processing of carbon steel, alloy steel and hardened steel material (hardness \leqslant HRC65) in precision mold industry.
- High precision in cutting diameter, ball nose profile, R-arc profile and shank.
- Using high-performance TiAlN nano-coating, with high temperature resistance and wear resistance.
- Special angle and long avoidance design.

CBN SERIES**H**

Maching high hardness materials HRC50 to HRC70[B73~B90]

- Maching high hardness materials HRC50 to HRC70 into finish process for long times.
- High speed cutting with 20,000rpm and over 20,000rpm of tool and supplying air mist recommended.
- Good cutting ability due to negative rake angle.

Diamond Coating Square End Mill

Square End Mill

● Features

1. Finishing and rough integrated wear-resistant diamond coating.
2. The left and right front and back teeth, and the bottom edge can be cut in layers.
3. Improve the smoothness of the product while achieving efficient processing.

● Application

Suitable for aramid honeycomb, carbon fiber T300 T700 T800, glass fiber, and carbon composite materials.

Carbide End Mill Cutter
For CFRP,GFRP

N

Diamond Coating Square End Mill

Square End Mill

● Features

1. Medium and rough integrated wear-resistant diamond coating.
2. U-shaped groove with alternating teeth, finishing and rough integrated groove.
3. Achieve efficient processing while improving product smoothness.

● Application

Suitable for composite materials of aramid fiber, carbon fiber T300, PEEK polymer materials.

2 FLUTE, TAPER NECK BACK DRAFT TYPE

- If the workpiece has draft angle, the interference length will be longer than the L2.
- Please refer to the effective neck length for the various draft angles
- In addition, the angle at which the tool will interfere with the workpiece is shown as the "interference angle θ_2 ", and should also be referred to

* The effective neck length shown is not an exact value and to avoid contact with the workpiece, we recommend the user control the precise value of this length.

CBN 2 FLUTE BALL NOSE

- Machining high hardness materials HRC50 to HRC70 into finish process for long time.
- High speed cutting with 20,000rpm and over 20,000rpm of tool and supplying air mist recommended
- Good cutting ability due to negative rake angle.

CBN End Mill(HRC≤70)
For High-Hardened Steels up to HRC70

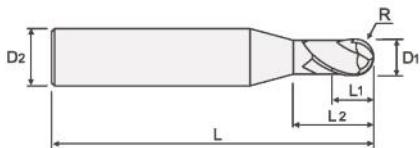

CN2BE SERIES

CBN 2 FLUTE BALL NOSE

- Machining high hardness materials HRC50 to HRC70 into finish process for long time.
- High speed cutting with 20,000rpm and over 20,000rpm of tool and supplying air mist recommended
- Good cutting ability due to negative rake angle.

For High-Hardened Steels up to HRC70

CN2CR SERIES

CBN, 2 FLUTE CORNER RADIUS

- Machining high hardness materials HRC50 to HRC70 into finish process for long time.
- High speed cutting with 20,000rpm and over 20,000rpm of tool and supplying air mist recommended
- Good cutting ability due to negative rake angle.

CP2CR SERIES

CBN, 2 FLUTE CORNER RADIUS

- Machining high hardness materials HRC50 to HRC70 into finish process for long time.
- High speed cutting with 20,000rpm and over 20,000rpm of tool and supplying air mist recommended
- Good cutting ability due to negative rake angle.

- Please adjust the cutting depth index according to the cutting depth factors of above table.
- For Rib or Slotting machining process which are not easy for chip ejection, please reduce the cutting depth by 20~30% from the above cutting condition.

ex) ZSTNB2040-20-10, HRC 55, Rib processing

Cutting depth : 0.32(standard cutting depth) X 0.65 X 0.8 = 0.17mm

- In actual machining, the condition should be adjusted according to the machining shape, purpose and the machine type.
- If RPM of the machine is low, the feed rate should be low in the same ratio as RPM.

- Please adjust the cutting depth index according to the cutting depth factors of above table.
- In actual machining, the condition should be adjusted according to the machining shape, purpose and machine type.
- If RPM of the machine is low, the feed rate should be low in the same ratio as RPM.

MFPN66 SERIES

66° Face Mill with High Economical and 10 Cutting Edge Insert for Higher Productivity

- ★ Stability and cost efficiency with 10-edge pentagonal inserts.
- ★ Low cutting forces and reduced chattering with a helical cutting edge design.
- ★ Tough and reliable dual cutting edge design.

THN45 SERIES

45° Face Mill with High Economical and 12 Cutting Edge Insert for Higher Productivity

- ★ Enhanced cutting edge for cutting stability and high feed machining.
- ★ Acute cutter pocket design and inclined screw clamping enables robust clamping.
- ★ High helical cutting edges for smooth machining double-sided 12 corner insert.

TSON45 SERIES

45° Face Mill Offers Advantage of Using Square, Octagonal Inserts in the Same Pocket

- ★SNMU insert offers double-sided, square inserts with eight cutting edges.
- ★Most suitable for a large depth of cut and free cutting inserts with excellent chip control.
- ★ONMU inserts offers double-sided, octagonal insert with 16 cutting edges – high economy inserts.
- ★Light cutting force due to excellent chip control.
- ★The optimized cutting edge creates barrel-formed chips for easy removal, allowing an operation at higher feed rate.

TSN SERIES

Shoulder Milling Cutter with 8 Double-Sided Cutting Edge and Low Cutting Forces for Reduced Chattering and Superior Fracture Resistance

- ★ The insert is double-sided eight cutting edge type, which is economical. The large front angle of the insert is designed to cut easily.
- ★ There are M and ML grooves to meet the processing requirements under different working conditions

TTP SERIES

TTP's economical insert with 3 cutting edges and optimized geometry improves efficiency and productivity with the square shoulder milling cutter.

- ★ 3 cutting edges on one insert for highly economical machining.
- ★ Optimized relief geometry on the positive insert ensures low cutting force and minimal chattering.
- ★ Helical cutting edges and optimized positioning on cutter provide high wall accuracy and surface quality.
- ★ Sharp and tough rake geometry reduces fracture of cutting edges.
- ★ Triangular shape of the insert improves clamping rigidity and reliability.
- ★ Insert sizes in 10, 15 mm cover small to large depths of cut.

TAN90 SERIES

Shoulder Milling with 4 Cutting-Edge Double-Sided Insert for High-Feed Machining

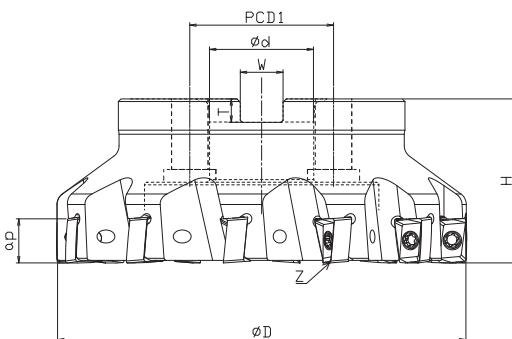

- ★ Double sided insert with 4 sharp and tough cutting edges.
- ★ Available in 3 sizes and wiper edge for excellent surface finish.
- ★ Low cutting force due to large rake angle.
- ★ Positive rake face for smooth machining and reduced vibration.
- ★ Highly rigid cutter body.

TWN90 SERIES

Shoulder Milling Cutter with 6 Double-Sided Cutting Edge and Low Cutting Forces for Reduced Chattering and Superior Fracture Resistance

- ★ Sharp cutting due to lower cutting forces.
- ★ Reduced chattering even with extended milling adapters.
- ★ Superior fracture resistance with thick edge design.

TLX SERIES

High productivity and stable cutting with large depth of cut in shoulderng and finishing.

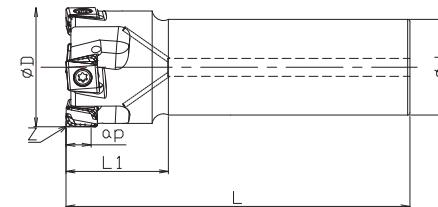

- ★ Tangential insert with high stability guarantees exceptional reliability in shoulderng and finishing.
- ★ Economical double sided insert - Large rake and inclination angles reduce cutting forces and provide stable, smooth cutting

EAP Right Angle Shoulder Face Mill

- ★ Suitable for 11° positive angle insert tip.
- ★ Suitable for various types of inserts, applicable to aluminum and steel milling.
- ★ Screw locking, large space for chipping, excellent chip removal performance.
- ★ Cutting smoothly, low resistance.
- ★ Customized aluminum milling cutter is available.

TAL SERIES

The Premium High-Speed Milling Tool For Aluminum

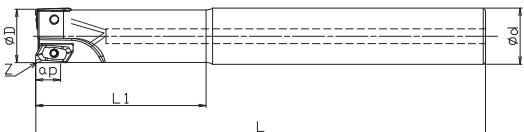

- ★ The New Premium Milling Tool Line for Aluminum Machining
- Enhanced Productivity
- ★ Increased productivity due to high speed capability
- Improved Surface Finish
- ★ Excellent surface finish and perpendicularity with high-precision products
- Excellent Clamping Stability
- Satisfactory clamping force of inserts by the use of the key shape

TLU SERIES

Multifunctional milling cutter with center cutting edge

- ★ Innovative four-edged inserts provide ultimate machining flexibility and economy - from flat bottom drilling to profiling
- ★ With center cutting capability, a single cutter can perform a wide array of applications, enabling process and tool integrations for maximum productivity. Dovetail insert clamping ensures for high process security.
- ★ Maximum cost per edge for shoulder cutters with a center cutting edge .
- ★ A single insert can be used either for center edge or peripheral edge and can be used twice in each position - four total cutting edges for highest insert economy.
- ★ Easy to make hole bottoms as flat as possible. Also makes it suitable for counter boring.

TLXFD SERIES

TLX SlotMill Series is an economical slot milling line for improved surface finish in slotting, face milling, and back-face milling.

- ★ An economical slot milling solution with stable chip formation allowing deeper slots thus increasing productivity and stability in machining.
- ★ 4 corners available with grade gedge .
- ★ High productivity due to a large number of edge lines small gap between ridge and ledge
